**Metrogas Selects Agentis Software
For IT Governance and Compliance Solution**

***Argentina's largest natural gas distribution company uses
AdaptivEnterprise to automate process control, monitoring, and
reporting across its national network***

ATLANTA, GA – April 19, 2006 – Agentis Software, a leading provider of intelligent IT solutions, today announced that Metrogas has completed their Agent Monitoring Framework (AMF) implementation using Agentis AdaptivEnterprise. AMF is part of an enterprise initiative that provides the company with a complete system that manages data center auditing and reporting operations to insure Sarbanes-Oxley compliance.

“It is the most advanced enterprise auditing and reporting compliance solution implemented in Latin America,” said Omar Arab, President, Agentis Software Iberoamérica.

Metrogas distributes gas to commercial, residential, and industrial customers throughout Latin America. Previously, they had managed all of their IT auditing and reporting manually prior to their selection of Agentis AdaptivEnterprise to build the AMF application. Manual auditing and reporting made it difficult to govern deployments and became a drain on time and resources. In order to gain a consolidated view of the status of business applications in production Metrogas relied on individual reports entered into disparate data collection systems. As a result it was difficult or impossible to track and audit business operations as the company lacked a uniform process for IT governance.

The AMF project began in October 2005 and rolled into production in less than 6 months. Metrogas completed their implementation using the services of Patagonia Technologies, an Agentis System Integration partner based in Buenos Aires, Argentina. The project included integration of existing data center applications, which will assist in streamlining asset and customer information and support future data center process automation.

"AMF provided immediate cost savings by dramatically reducing our data center operations cost," said Juan José Dell' Acqua, CIO Metrogas. "It gives us a standardized framework for IT governance and compliance verification." AMF combines powerful event driven process automation, orchestration, and management with flexible reporting capabilities in an extremely easy-to-use environment that enables an organization to document controls and automate the ongoing monitoring and reporting process." Completely web-based, AMF maximizes end-user participation with little training. Its dashboards can be used by project managers, documentation team members, internal auditors and external auditors to plan, document and verify the internal controls framework of the company.

"IT governance and compliance is about far more than just gaining a tighter grip on IT investment and regulatory compliance," said James N. Marshall, CEO of Agentis Software. "AMF enables Metrogas to ensure that all IT investments are justified, are executed efficiently and will deliver the right business result. By working with Agentis, Metrogas has been able to introduce optimal IT governance systems to the benefit of both the IT team and senior management."

About Metrogas

MetroGAS S.A. is a natural gas distribution company. The Company has over 1.9 million customers in its service area, which includes the City of Buenos Aires and southern and eastern greater metropolitan Buenos Aires. Residential customers receive residential service and pay MetroGAS the tariff for that class of service. The Company's contracts with electric power plants contain provisions, pursuant to which the power plant is required to pay for reserved transportation capacity. The customers of MetroGAS include industries, such as glass, food, chemical and paper producers.

About Agentis Software

Agentis Software provides a low risk and proven platform for rapidly and cost effectively building, deploying, and maintaining adaptive software applications and services. Agentis customers include major global end-user organizations and third party firms in the US, Europe and Latin America. The company is headquartered in Atlanta, GA and has additional offices in Buenos Aires, Argentina. For more information, please visit: www.agentissoftware.com
